3.2 • PROPOSED SOLAR GENERATION PROJECT AT PLANT #4

Water Resources Director Jim Glancy displayed slides and introduced a proposal, outlined in the agenda, to generate electricity at Plant #4 with a solar collection system.

Bill Simmons, City Light and Power, displayed slides defining the financing, installation and maintenance of a photovoltaic generation facility that could eliminate or greatly reduce the energy used for Plant #4 booster pumps. He stated that the flat mounted panels, which would be installed on the roof of Tank #3, could be partially funded by the California Solar Initiative rebate program offered through the Southern California Edison Company. He noted that in addition to energy cost savings over the 30 year life of the project, removing the load from the power grid for the City would increase the power available for other uses during peak hours and eliminate the production of pounds of greenhouse gases.

Mr. Glancy reported that the proposal had been reviewed by the Water Resources Committee whose recommendation had been to authorize the Mayor to sign a letter of intent with City Light and Power, Inc.; authorize an application for a rebate under the California Solar Initiative; appropriate $10,000 from the Water Fund for the solar rebate application costs; and direct staff to finalize an agreement with City Light and Power, Inc.

Responding to a question from Council Member Esquivel, Mr. Simmons stated that while there was not a similar project currently in another city, the proposed equipment was being utilized for several similar commercial projects.

Vice Mayor Croft stated that as a member of the Water Committee he would heartily endorse the project as being good for the environment and good for the City. He noted that the project costs would be almost completely offset by energy savings costs and the available rebate funds and that the savings could be even greater should the cost of energy rise over the life of the project.
